

Health Care Administration

At UW-Eau Claire

Are you a leader? Today is a time of change and challenge in health care, and new leaders are needed to guide development of innovative methods that provide the highest quality health services at affordable costs. You can make a positive difference in the lives of others by joining efficient management practices with a dedication to service.

Tell me more

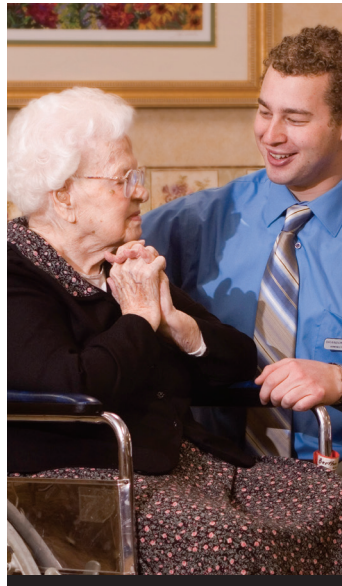

The Health Care Administration (HCAD) program is focused on long-term senior care (management of nursing homes, senior assisted living facilities, etc.) as opposed to hospital or clinic administration. The faculty in this program are dedicated to helping you become a leader in the health care field.

Outstanding outlook

The demand for health administrators is predicted to grow faster than other careers in coming decades. The salary and benefits for a baccalaureate education are excellent, as is the opportunity for leadership within the profession and in public policy circles. The HCAD program also provides a firm foundation for lifelong career development.

Experience

Ours is the only long-term care administration program that includes a 50-week practicum where students work in a health care setting while completing coursework online. The HCAD program also offers opportunities for research with faculty, participation in our student organization and community service events, and networking with professionals in the field who serve on our program advisory board.

Encouraging empathy

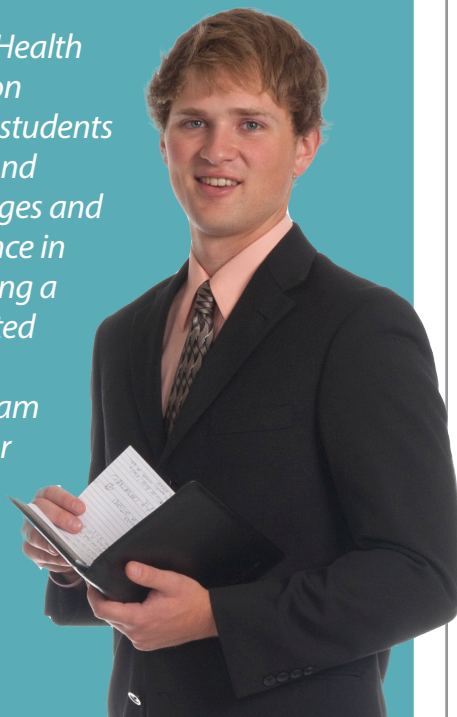

HCAD majors take a course in which they live as residents for a day at a senior health care facility. The goal is to gain understanding and empathy for the life transition.

And the award goes to:

The UW-Eau Claire health care administration program has more than 30 years of success in preparing health care administrators and is the premier program in the Midwest. The program is one of only nine in the country accredited by the National Association of Long-Term Care Administrator Boards.

"The outstanding Health Care Administration program provides students with managerial and leadership challenges and hands-on experience in a facility, while being a nationally accredited and recognized degree. The program sets students up for success."

— Eric

Our graduates

Our health care administration graduates became administrators at hospitals or skilled care nursing facilities, sub-acute care facilities or rehabilitation centers, assisted living centers or senior housing programs, Alzheimer's

care facilities, hospice programs, and home health care programs. Other positions include departmental supervisor at a hospital nursing home, clinic human resources director or business office manager of a health

care organization, consultant to health care facilities, and manager/director of an adult day care or senior center.

Majors

Health Care Administration (comprehensive major; requires no minor)

Course work

The coursework is in four areas:

- Administration, including accounting, finance, management principles and personnel management.
- Health care, including an introduction to health care administration, overview of U.S. health care, health economics, medical terminology, and advanced coursework focusing on leadership and management, delivery systems and programs in health and aging services.
- General requirements and other additional course work, including English, biology and chemistry, human nutrition, ethics, statistics and other foundation courses.
- A health care practicum component that explores all practical aspects of health care administration designed for a 12-month practicum.

Suggested freshman curriculum

Health care administration
University writing requirement—
depending on placement exam.
For test out options, see uwec.edu/
Blugoldseminar/testout
